Some of our most requested features, such as live filters, are now enabled on the new renderer infrastructure. “Creating images demands a connection to the nodes and routing of the network, which means application must be aware of what’s going on, in real time,” said Toni Dajani, Photoshop Product Manager. “We’ve planted the seeds today towards creating a near future where Photoshop has all that and more. Collaborative editing and review have been a core mandate for Photoshop. The release of Share for Review makes it straightforward to invite people into an editing project, and use that to quickly review and provide feedback. New features around rendering and compression ensure the best quality output of images, and improved file handling and navigation workflows make editing and sharing a breeze.
