The main difference between Lightroom 5 and Lightroom 4 is that in Lightroom 4 the project/folder structure was used for four different methods of accessing images. With Lightroom 5, all the project folders have disappeared, and you now only have the Index, Media and Exported collections. The documentation for Lightroom 5 says that the project folders have been replaced by collections, but does not say why. Collections automatically group images together, and the folders in which they appear are not displayed. However, using the Total Commander File Manager or another file manager you can easily access the file structure of Lightroom 5. Pressing the *Ctrl+I* or *Shift+Ctrl+I* on Windows, or *Cmd+I* or *Shift+Cmd+I* on OS X, and you will see all of the Lightroom 5 collections. This is very convenient for finding images, and images not in libraries (which are stored in the **Exported** folder). You can also map any drive letter that you have mapped in Windows Explorer to a Lightroom collection. For example, if you map your C: drive to a **Lightroom** collection, you can then map a different drive letter, such as Z:, to a **Lightroom** collection, and so on. Once you have mapped a drive letter to a collection, double-clicking it in Windows Explorer will open that collection in Lightroom. Since the collection layout is more intuitive than the project hierarchy, it is likely to become the standard way to navigate the Lightroom file structure. A permanent link will be added to the top of every collection, so that the link can be used to open collections wherever they are stored.

The power to work collaboratively with others wasn't always a given in the world of desktop editing. Adobe set a new standard with Photoshop. Now in version 15, Photoshop is powered by advanced technology from Adobe Sensei, including AI and Photoshop Markers, Smart Objects and Filters, that make working in a collaborative environment a breeze. "If you remove Photoshop from the equation, it's really impossible to create a professional-quality photo," said Brad Green, senior vice president of Digital Imaging Business at Adobe. "While Photoshop has always been the brand of choice for image editing, we're now able to transform the way in which it's used. Using the advancements we announced at MAX, the photographer, artist or hobbyist can now complete a variety of high-quality image editing projects without leaving Photoshop." The key to the new features just announced at MAX and a part of Photoshop's massive new features is AI: Adobe Sensei. Sensei is an intelligent and innovative technology that handles all our AI tasks, from identifying objects in images, to generating thumbnails, to making intelligent recommendations in the panel. In addition to running on desktops, it's also coming to mobile. Imagine getting a look at your images and seeing tools to help you improve or enhance them and considering applying filters to your images. "Keeping it all in Photoshop is the ideal," Green said. "But for some people, that's just not practical. To help drive adoption of these technologies, we're building Adobe Sensei into desktop, mobile and online-enabled products, like Photoshop. This will completely change the way we approach image editing in the future."

Those layers that were created in previous versions of Photoshop and exported to PSD will be fully compatible with Photoshop 2018 and will update all their style information. Layer styles can be cut out of a PSD file and re-exported from Photoshop CS6 or later. If inconsistencies were found in the exported version, you can safely discard the exported style. The latest version of Photoshop has some usability enhancements for professionals and even some home users.
